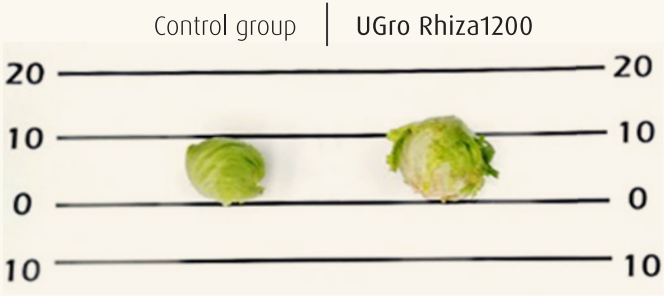
We design and manufacture Rhiza1200, with the simple purpose of offering a product for specific use for those growers who know what they are looking for and what action they want for their plant.

So for best results, Rhiza1200 is made from a single, very potent component (Rhizophagus Irregularis 1200 cfu/g) that significantly accelerates root system development and shoot and root biomass, activating within 24 hours in addition to other benefits.

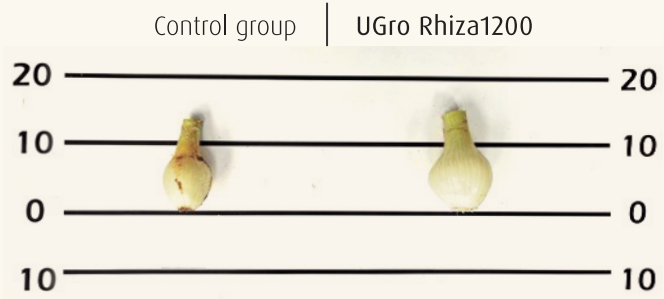
BENEFITS OF RHIZA1200

- Improve the absorption of nutrients, establishing a symbiosis between the microorganism and the plant.
- Provides protection to the plant so that it becomes more resistant to certain environmental stresses, diseases and pests. Resistance to pathogens such as pythium and fusarium.
- Facilitates the development of the first stages of the plant, either after germination or after propagation.
- The aerial structure of the plant, favoring both height growth and the formation of shoots and branches.

We have carried out a study with Rhiza1200 in the cultivation of lettuce and onion and the results speak for themselves:



Represents a 32% increase in the harvest treated with Rhiza1200 compared to the control.



Represents an increase of 132.3% in the weight of the crop with respect to the control.

MODES OF USE

Seeds:

- Once the seed has germinated and before planting, immerse the plug/plugin in a solution of 0.5 g of UGro Rhiza per liter of water for 1 minute.
- Then apply UGro Rhiza via irrigation 15 days after.

Mix with rooting hormones:

- Mix the 4g sachet of Rhiza1200 with a 50ml pot of growth hormones for a faster and more effective action. Roots appear instantly.

Cutting:

- Make a cross cut to the cutting.
- Dip the cut in rooting hormones.
- Dip the cut in UGro Rhiza powder.
- One week later apply on the plugs/plugins a UGro Rhiza solution of 0.5 gr per liter of water.

In irrigation:

- Dissolve Rhiza1200 in water according to the necessary quantities and add the mixture to the soil or substrate.

In transplanting in peat application and coconut substrate application:

- Apply 0.5 g of UGro Rhiza underneath the root of the plant.
- Apply via irrigation at intervals of 4-6 weeks.
