Life is easier when the quality of your substrate is optimal. The properties of the raw material and the structure are decisive for the success of the crops.

Our tray is characterized by a **high aeration capacity that guarantees exceptional good drainage**, considerably reduces the proliferation of fungi and ensures that rooting produce faster than in other propagation trays.

Produced with an ideal and exclusive combination of **coconut substrate and perlite of controlled and certified origin**, treated with slow-release fertilizers.

### EASY EXTRACTION

**UGro COCO Pure Plug Tray** plugs keep their size in both wet and dry conditions, preserving the physical properties of the substrate in both situations. Its size slightly smaller than the diameter of the alveoli allows **transplanting quickly and comfortably, taking maximum care of the well-being of the new plant and its root system.**

Pure Plug Tray is equipped with pre-drilled insertion holes that allow quick work and ensure both a uniform insertion depth and a good contact with the substrate in the case of seed germination.

Product code	Plugs/Tray	Insertion holes/Plug	Plug Ø
