

UGRO BENEFITS

¿Why BACKmagic?

A powerful and improved formula based on beneficial bacteria for plant care. Improves the development and increase the weight of flowers and fruits. It removes excess nutrients, old roots and accelerates the formation of the root structure. Strengthens plants against stress, improving their immune system and protecting them against pests and diseases.

www.ugrobenefits.com

- A stabilized biological system of bacterial spores.
- Stimulates different types of enzymes including; amylases, proteases, lipases, cellulases, among others.
- Promotes Gibberellic precursors and mobilises nitrogen, phosphorus and potassium retained in soils, reducing phosphorus contribution by a whopping 20%!
- Combats stress in situations of excessive fertilization.
- Team with **UGro COCO** to replenish and renew the coco substrate.
- Slows down clogging, usually caused by organic matter which allows **BACKmagic** to stabilize and facilitate irrigation for a much longer period of time.
- Helps plant setting and fattening.
- Antibiotic action.
- It generates 8 different enzymes, including some with a fungicidal

function and others that decompose organic matter or release nutrients from the soil.

- Prevents the germination of rhizoctonia and fusarium spores.
- Produces vitamin B12.
- Growth-promoting rhizobacteria with the ability to rapidly colonize the root.

Use of BACKmagic

- In crop cycle: Add 0.5 ml per liter of water (pH range of 5.5 to 7). This allows the plant to take all of the nutrients correctly.
- At the end of cultivation: Add 2 ml per liter of water for cleaning.
- Store in a dry and cool place.

Composition

- Bacillus licheniformis 2.4 x 1⁷
- Bacillus megaterium 1.1 x 1⁷
- Bacillus pumilus 1.2 x 1⁷
- Bacillus amyloquefaciens 1.2 x 1⁷
- Bacillus subtilis 1.1 x 1⁷
